

WHAT IS CLAIMED IS:-

1. A printing fluid dispenser system comprising a number of printing fluid dispensers each including:
one of a number of printing fluids;
a feature configured to locate the dispenser at predetermined location upon an inkjet printer
5 component to be refilled; and
an outlet located at one of a number of predetermined positions relative to the feature
depending upon the type of printing fluid within said dispenser .
- 10 2. A printing fluid dispenser system according to claim 1, wherein the inkjet printer component is a
removable inkjet printer cartridge.
3. A printing fluid dispenser system according to claim 2, wherein the removable inkjet printer cartridge
includes a pagewidth printhead.
- 15 4. A printing fluid dispenser system according to claim 1, wherein the feature configured to locate the
dispenser at a predetermined location comprises a connector arranged to mate with a refill port of the
inkjet printer component.
- 20 5. A printing fluid dispenser system according to claim 4, wherein the number of predetermined
positions of the outlet lie within a region defined by the connector.
- 25 6. A printing fluid dispenser system according to claim 5, comprising a number of printing fluid
dispensers wherein the number of printing fluids include a range of inks colored to facilitate color
printing.
- 30 7. A printing fluid dispenser system comprising a number of printing fluid dispensers each including:
a colored ink;
connector arranged to mate with a refill port of an inkjet printer cartridge to be refilled, the
refill port including a number of discretely positioned inlets; and
an outlet positioned to mate with one of the discretely positioned inlet ports depending upon
the color of the colored ink .
